PROFESSIONAL SUMMARY

Full Stack Java Developer with 5+ years of experience designing and building scalable enterprise applications across government, insurance, logistics, and finance domains. Strong expertise in Java, Spring Boot, microservices architecture, REST APIs, and React-based front-end development. Experienced in building distributed systems with Kafka, Redis caching, and SQL/NoSQL databases (MS SQL, MySQL, MongoDB). Skilled in performance tuning, API optimization, secure authentication (JWT, OAuth2, RBAC), and cloud-native containerized deployments using Docker and Kubernetes (in progress). Actively leverages AI-powered development tools including GitHub Copilot, Claude AI, and ChatGPT to accelerate coding, improve debugging efficiency, and enhance software quality.

TECHNICAL SKILLS

Languages: Java 8/17, JavaScript, TypeScript, SQL

Backend: Spring Boot, Spring MVC, JPA/Hibernate, RESTful APIs, Swagger/OpenAPI

Microservices: Microservices Architecture, Spring Cloud (in progress), API Gateway, Service Discovery

Frontend: React.js, Angular, Redux, TypeScript, Material UI, HTML5, CSS3

Databases: MySQL, PostgreSQL, MS SQL Server, MongoDB

DevOps & Tools: Docker, Docker Compose, Git, GitHub, Bitbucket, Maven, Gradle, JIRA, Postman, Figma

Cloud & Infra: Kubernetes (in progress), Helm (in progress) — via Udemy Microservices course

Testing: JUnit 5, Mockito, Testcontainers, REST Assured, JaCoCo, TDD

Security: JWT, OAuth2, 2FA, RBAC (Role-Based Access Control)

AI Development Tools: GitHub Copilot, Claude AI, ChatGPT

WORK EXPERIENCE

Full Stack Developer | Independent Projects | Ontario, Canada | Jun 2025 – Present

- Built and deployed full-stack applications focusing on scalable architecture, secure authentication, and production-ready design.
- Developed BudgetIQ, a personal finance platform with recurring transactions, goal tracking, JWT/OAuth2 authentication, and optimized SQL queries with indexing and caching.
- Built StrongPass Generator, a Dockerized secure password generation tool with REST APIs and React UI.
- Implemented unit and integration testing using JUnit 5, Mockito, REST Assured, and Testcontainers.
- Currently enhancing expertise in cloud-native development through hands-on training in Spring Cloud, Kubernetes orchestration, Helm, and Spring Security.
- Applied AI coding tools (GitHub Copilot, Claude AI, ChatGPT) to accelerate development, debugging, and code refactoring.

Tech Stack: Java · Spring Boot · React (TypeScript) · MySQL · Material UI · Docker · JWT · OAuth2 · JUnit 5 · Mockito · GitHub

Senior Full Stack Java Developer | E-Procurement Technologies Ltd. | India | Aug 2022 – Dec 2024

- Led development of enterprise procurement and document management systems using Spring Boot microservices and ReactJS.
- Designed and implemented RESTful APIs and scalable backend services for enterprise workflows.
- Implemented Kafka-based asynchronous processing for notifications and workflow automation. Leveraged AI-assisted development tools (GitHub Copilot, Claude AI, ChatGPT) to accelerate development, debugging, and code refactoring.
- Optimized system performance using Redis caching and database tuning across MS SQL, MySQL, and MongoDB.
- Developed secure digital signature workflows and audit logging systems.
- Participated in architecture design, CI/CD improvements, code reviews, and Agile delivery.

Tech Stack: Java Spring Boot · ReactJS · Microservices · Kafka · Redis · MongoDB · Swagger · MS SQL · MySQL · Docker · Git · SVN

Software Engineer | Entrust Software Development | USA (Remote) | Jan 2020 – Jul 2022

- Developed enterprise applications for insurance and logistics domains using Java Spring Boot and React/Angular.
- Built real-time systems using Kafka, WebSockets, and SSE for fleet tracking and communication.

- Improved API performance using caching, connection pooling, and optimized SQL queries.
- Worked with PostgreSQL, MySQL, MongoDB, and MS SQL databases for transactional systems.
- Maintained high code quality through TDD practices and automated testing frameworks.

Tech Stack: *Java Spring Boot · Angular · React · MySQL · Kafka · Redis · PostgreSQL · WebSockets · JWT · JIRA · Bitbucket*

Software Engineer Intern | Silverwing Technologies Pvt. Ltd. | India | Jun 2017 – Dec 2017

- Developed responsive client websites using HTML, CSS, Bootstrap, and JavaScript with a focus on performance optimization and cross-browser compatibility.

PORTFOLIO PROJECTS (Ontario, Canada — June 2025–Present)

BudgetIQ — Personal Finance Tracker [GitHub Repo](#) | [Video Demo Available](#)

- Full-stack finance management application featuring income/expense tracking, recurring transactions, financial goal visualization, and secure authentication.
- Implemented JWT, OAuth2, RBAC, and 2FA security features while optimizing backend performance using caching and indexed database queries.
- Containerized the application using Docker Compose and established automated testing for both unit and integration layers.

StrongPass Generator — Secure Password Web App [GitHub Repo](#) | [Video Demo Available](#)

- Built a secure password generation platform with customizable password rules, RESTful APIs, and responsive React-based UI.
- Implemented Dockerized deployment along with comprehensive testing using JUnit 5 and REST Assured.

EDUCATION

Bachelor of Engineering — Computer Engineering

Gujarat Technological University, India | 2019

CERTIFICATIONS & CONTINUING EDUCATION

- **Master Microservices: Java, Spring Boot, Spring Cloud, Docker, Kubernetes & Helm** — Udemy (In Progress, 2025)
- **Unit & Integration Testing of Java & Spring Boot Applications (TDD)** — Udemy
- **Java Developer Program** — CDAC, India
